STONE

The image displays a close-up of a honey onyx stone surface. The pattern is characterized by a light cream or off-white base color, which is intricately veined and mottled with various shades of golden-brown, tan, and light beige. The veins are irregular and organic, creating a complex, natural-looking texture. The overall appearance is that of a polished, natural stone material.

HONEY onyx

sabalan[®] NATURAL
STONE

The image displays a detailed view of Oyster Onyx, a natural stone characterized by its complex, organic patterns. The surface is composed of various shades of cream, beige, and light tan, interspersed with darker, more intricate veins of brown, tan, and grey. These veins often form swirling, cellular, or shell-like structures, giving the stone a unique, almost biological appearance. The texture is smooth but shows natural variations in color and pattern throughout the surface.
